

PA-FULLSELECT

FRESH CHERRIES SORTER

Processing capacity range: 4,000 to 6,000 liters per hour

User-friendly software
Touch screen panel, with intuitive zoom manager

Automatic recognition sensors for impurities

High-resolution Full Color Optical System.

The optical unit immediately analyzes the cherries and when a defective bean is identified, it is removed from the flow of the machine by compressed air ejection.

PA- FULLSELECT FRESH CHERRIES SORTER

After coffee beans undergo pre-cleaning, they are directed to the selector's supply hopper, where they are dosed by vibrating feeders to control the flow.

Beans then pass through an air curtain and then transferred to the conveyor belt through a toboggan for beans stabilization flow. On the conveyor belt, product gains speed to be thrown to the optical unit.

The optical unit immediately analyzes the product and when a defective bean is identified, it is removed from the system by means of a compressed air ejection.

The PA-FULLSELECT fresh cherries sorter is the only one that has a high-resolution full color optical system, in addition to having an easy and quick-to setup operating system due to the use of automatic sensitivity adjustment.

TECHNICAL SPECIFICATIONS

Optional metallic structure (feet and platform), offered separately

Optional inlet hopper

Processing capacity range: 4,000 to 6,000 liters/hour

Robust electronic system with low maintenance cost

Low electrical consumption and low pneumatic consumption

Automatic sensitivity adjustment

The best of Japanese precision coupled with the largest Brazilian manufacturer of agricultural machinery and implements for coffee beans in the world.
